# PHORMITEX LUMINA 13 O

To protect the crop against too intense irradiation during hot summer days, Phormium introduces **Phormitex Lumina 13 O**. This woven, flame retardant, open screen guarantees **good scattering of the incoming solar radiation** by its diffusive yarns and at the same time a **high ventilation capacity** of the greenhouse thanks to its unique woven open structure.

A remarkable property of **Lumina 13 O** is its **well-balanced shading degree**. It shades enough to protect the plant but not too much. The availability of enough PAR-light is highly important for the growing and development of the plant.

The woven structure ensures high dimensional stability and strength. Like for all woven screens Phormium, offers a **warranty of 8 year**.

**NO COMPROMISE NEEDED WITH PHORMITEX LUMINA 13 O: UNEQUALLED COOLING CAPACITY WITH LIMITED LIGHT RESTRICTION.**

The figures compare Lumina 13 O with the knitted alternative on a relative scale.
